

RainMaker Suite

Software Installation Requirements

Before you begin the installation process, let's go through the installation checklist.

Server Requirement:

1. PHP 5 or above compiled with CURL , and XML support.
2. Zend Optimizer 2.5.5 or above.
3. CURL , (mysqli or mysql), FTP , XML and GD2 extensions support.
4. SSL enabled Web Server for Recurring or Auto Billing capability.
5. MySQL 4.0.0 or above.
6. Ability to run index.php as the index page default.
7. Full execute, read and write permissions under document root directory for your domain account.
8. 50 mg minimum of web space.
9. Mail Program: Sendmail or SMTP .
10. Ability to run Cronjobs (not so required as RainMaker have a built-in [FakeCron](#). Cronjobs are highly preferred).
11. DNS-Wildcard (Only required if you intend to use Sub-domain URLs) ex:
userid.companydomain.com

MySQL Database:

1. Recommend atleast 20MB of harddrive space.
2. Must have database Hostname, Database Name, Username and Password.
3. The database user must have full privileges to: (Lock/Unlock Table, Read/Write, Table Alter, Drop Table).

Note: If your hosting account or server do not meet all of the above requirements, please contact your server administrator.
